Intranet packages

Our Intranet packages range from a Start up package solution using out of the box SharePoint features to get your Intranet up and running, an Engagement package where we build out the framework using SharePoint out of the box features, through to our Full package option where your organisation will benefit using the full potential of Office 365's collaboration tools and custom components to build an Intelligent Intranet. In addition, we offer Valo Intranets where standard SharePoint features are simply not enough.

Our approach

SharePoint Gurus delivers projects using a hybrid 'agile' approach which balances planning with discovery. As the intranet project evolves, features can be implemented as they are understood. Our initial workshop will showcase SharePoint features and opportunities, as well as obtaining your requirements. A typical project would include:

- Kick off meetings
- Planning and training workshops
- Discuss and identify existing challenges
- Review of existing internal systems
- Explore the use of metadata
- Review security requirements
- Review any existing SharePoint, Teams and file share structure
